Original plans as set out in "Notice of Intention to Drill" were to complete this well as a dual gas (Yates) and oil (Queen). Well was drilled to 3400', $\frac{5}{8}$ " casing set at 3260-42'. Went in with tubing and seal nipples and Garrett sleeve and treated with 4000 gallons oil and 4000# sand through casing in Yates Formation. Lowered tubing & upper seal nipple into packer, isolating Yates Formation to casing annulus. Treated Queens Form. with 550 gals. mud acid. Tested Yates Form., produced 31.97 bbls FLO on 14 hour flowing test through $1\frac{1}{2}$ " choke. Sand-oil treated Queens Form. with 4000 gallons lease crude and 4000# sand. Swabbed dry. Treated 3260-3400 with 2700 gals. Chem. Pre. 15% type J acid. Swabbed dry, no show of fluid and very slight show of gas. Put on Baker bull plug and seal nipples and closed in Queen Form.

It is proposed to complete as an oil well in Yates Form. through the perforations from 2855-2935 & 2965-3010 by leaving Baker prod. packer with bull plug and seal nipples as presently set at 3235'.
