1. The Effect of the Diet on the Blood Sugar in the Normal Individual and in the Diabetic Individual. (Continued from page 1070.)

By J. H. HARRIS, M.D.

From the University of Chicago

THE object of this study was to determine the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The results of the study are presented in the following tables.

The first table shows the effect of the diet on the blood sugar in the normal individual. The second table shows the effect of the diet on the blood sugar in the diabetic individual.

The third table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The fourth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The fifth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The sixth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The seventh table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The eighth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The ninth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The tenth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The eleventh table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The twelfth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The thirteenth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The fourteenth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The fifteenth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The sixteenth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The seventeenth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The eighteenth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The nineteenth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The twentieth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The twenty-first table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The twenty-second table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The twenty-third table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The twenty-fourth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The twenty-fifth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The twenty-sixth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The twenty-seventh table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The twenty-eighth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The twenty-ninth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The thirtieth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The thirty-first table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The thirty-second table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The thirty-third table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The thirty-fourth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The thirty-fifth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The thirty-sixth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The thirty-seventh table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The thirty-eighth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The thirty-ninth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The fortieth table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.

The forty-first table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual. The forty-second table shows the effect of the diet on the blood sugar in the normal individual and in the diabetic individual.
