Mr. R.F. Montgomery
New Mexico Oil Conservation Commission
Box 2045
Hobbs, New Mexico

Dear Sir:

Enclosed are copies of the packer leakage test, test data sheet, recording pressure charts and graph for the Amerada Petroleum Corporation Ida Wimberley No. 3, a dual completion in the Justis-Fusselman and Justis-Drinkard Pools, Lea County, New Mexico.

The following production and reservoir data on the two completions are presented for your information:

DRINKARD ZONE

Initial potential: Flowed 687 barrels oil per day on 24/64" choke, gas-oil ratio 711, corrected oil gravity 38.3. Static bottom hole pressure at 5884' (-2800) was 2662 psig.

FUSSELMAN ZONE

Initial potential; flowed 856 barrels oil per day on 3/4" choke, gas-oil ratio 885, corrected oil gravity 36.6. Static bottom hole pressure at 6984' (-3900') was 2853 psig.

Very truly yours,

Amerada Petroleum Corporation
