August 2, 1961

Well No. 7 is located 1980 ft. from [N] line and 1980 ft. from [E] line of sec. 24

SW/4, NE/4, Sec. 24 25S 37E NMPM
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Justice-Allenburger McKee Lea New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3079 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

packer leakage test in conjunction with MAP indicates communication between the McKee and Allenburger zones. The pressure at 7321' was 2478 psi, in the McKee and 2476 psi in the Allenburger tubing strings.

It is proposed to kill both zones with No-Blok, pull both tubing strings, inspect and test Allenburger string and run McKee string. The Allenburger tubing string will be latched into the Baker Model "J" packer at 7498'. A double "J" latch packer will be run on the Allenburger tubing string and set with the McKee tubing string at approximately 7265'. (approximately 90' above McKee perforations). Both zones will be swabbed in.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
