(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3074 ft.

**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This dual well was completed in January, 1959. The Fusselman perforations, 6923-6955, were treated with 1000 gals. 15% mud acid. It is proposed to acidize the Fusselman perforations, 6923-6955, with 4000 gallons retarded acid to increase production. Present production is 20 BOPGD and 30% water.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
