Re: Submission of re-completion forms on the Carlson B-25 No. 3-0-25  
25S-37E, Lea County, New Mexico

Gentlemen:

Please find enclosed our simultaneous application to the U.S.G.S. and the OCD to effect the following actions on the subject well:

1. Dual complete between the Justis Tubb-Drinkard and the un-designated Abo.
2. Apply for a forty (40) acre oil proration unit in the un-designated Abo.
3. Surface commingle liquid hydrocarbon production from the Abo with our existing battery facilities.

While we ended up with a rather unorthodox completion here, we hope that your department will agree that it is a prudent completion under the circumstances.

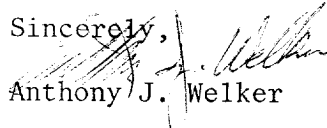

Please send us copies of Form C-123 (Application for New Pool Designation) if you deem it necessary.

No copies of these applications have been sent to offset operators yet. It is my understanding that they need not be notified unless you feel it is necessary for dual completion purposes, or in the event you classify this Abo zone as a gas completion and we make application for an unorthodox location and non-standard proration unit.

We will leave this Abo zone shut-in pending appropriate U.S.G.S. and OCD approvals.

Please advise if further information is required.

Sincerely,

  
Anthony J. Welker
