Well No. B25-3 is located 900 ft. from NY line and 1450 ft. from E line of sec. 25

SW 1/4 Sec. 56 (1/4 Sec. and Sec. No.) 25S (Twp.) 37E (Range) N. 11. P. 11. (Meridian)
Justia (Field) Lea (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is 3058 ft. approx.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well using rotary tools to approximately 7100' to test and produce the Fusselman Formation, if oil and gas are found in commercial quantity. The casing program is to set approx. 450' of new 13 3/8" casing cemented to surface. To drill 12 1/4" rotary hole to approx. 3300' and to drill 8 3/4" rotary hole to total depth. It is proposed to set new 7" casing to total depth of any producing formation. If conditions warrant, new 9 5/8" casing will be set as an intermediate casing string. It is proposed to cement all strings of casing to overlap or to surface. Formation logs will be run and copies of all test will be furnished State and Federal.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
