The elevation of the derrick floor above sea level is 3024 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well, using rotary tools to approximately 5900', more or less, to explore for commercial production in the Tubbs formation. It is proposed to set 11 3/4" or 9 5/8" casing, pending delivery, into the top of the sandstone formation at approximately 350', cementing the casing to surface. It is proposed to set 7" casing to total depth of commercial production, cementing same to base of salt at approximately 2200'. State and Federal regulations will be complied with.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
