The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

We propose to drill a well using rotary tools to approximately 3320' to expose the Queen's Formation; proposed casing program is to run approximately 1100' of 8 5/8" 24# J-55 new seamless casing covering and cementing to surface. To set 5 1/2" casing 1 4# new seamless J-55 casing to approximately 3250' cementing with 250 sacks. To run temperature survey to determine cement top. To run Gamma Ray-Mastron Log to T. D. To sandfrace to stimulate production. To set tubing into production area. To endeavor to comply with all State and Federal regulations. Permission to produce on completion is requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
