June 4, 1956

Well No. Carlson B. ^{26 #4} is located 1980 ft. from N line and 660 ft. from E line of sec. 26
NE 1/4 SE 1/4 Sec. 26 25S 37E N. M. P. M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Justis Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3030 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well using rotary tools to approx. 4950' to test and produce the Glorietta Formation: The casing program is to set and cement 8 5/8" csg. at approx. 2200' cementing w/100 sks. cement at the bottom, using a D. V. cement collar at the top of the salt and cementing to surface. To drill 7 7/8" rotary hole to T. D. cementing w/enough cement to tie to the 8 5/8" csg. To run gama-ray neutron log. To perforate and fracture formation for production. To run tubing to center of producing horizon and to produce in accord w/State and Federal Regulations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
