Gentlemen:

Your Jenkins No. 2 well located in Unit K of Section 29, Township 25 South, Range 37 East, is presently classified as a gas well in the Langlie Mattix Oil Pool.

However, in checking our records, it is apparent that the well has a plug back total depth of 3250 feet and is producing from perforations at 3112-3132 feet. These perforations are in the Seven Rivers formation and are above the vertical limits of the Langlie Mattix Oil Pool. On this basis, your Jenkins No. 2 is reclassified as a Jalmat Gas Pool well and should be shutin immediately.

Should you desire to produce this well, it will be necessary to file Commission Forms C-110 and C-122. In the event that less than 640 acres are dedicated to this well, it will also be necessary to obtain a NSP Order.

Yours very truly,

OIL CONSERVATION COMMISSION
