## FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

During drilling operations a string of 5" casing was run thru the high pressure gas zone encountered around 2700' and cemented with 55 sacks at 3156' to obtain a low gas/oil ratio well.

The well was completed June 9, 1936 with an initial production of 115 bbls. oil plus 30% water in 15 hours, natural, flowing with gas/oil of 550.

Since completion the water percentage has increased to the extent that the well will no longer flow naturally, except intermittently, and we therefore request permission to use sufficient gas from the bradenhead of this well to gas lift the oil production of the same well.
