DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill a well on the above described location to a total depth of approximately 3390'. The following casing and cementing program is proposed: Set 10-3/4" or 9-5/8" casing at 300' and cement with sufficient amount of cement to circulate. Set 5-1/2" or 7" casing at approximately 2880' with a Halliburton D.V. tool set at top of salt at approximately 1100', cement casing around shoe with 200 sacks and through the D.V. tool with 150 sacks cement. Well will be drilled in with oil, if necessary to obtain production to a total depth of 3390'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
