Well No. **A-6** is located **660** ft. from **100** line and **990** ft. from **E** line of sec. **33****SE SE Section 33**
(1/4 Sec. and Sec. No.)**25E**
(Twp.)**17E**
(Range)**NMPM**
(Meridian)**Langlie-Mattix**
(Field)**Lea**
(County or Subdivision)**New Mexico**
(State or Territory)The elevation of the derrick floor above sea level is **3007.2** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Seven inch 20# casing was set in this well at 2400' and cemented with 450 sacks of cement. The well was bottomed at 3257' in the Queen zone leaving the Yates, Seven Rivers, and Queen open hole. Due to excess gas being produced and a resulting high gas-oil ratio, it is planned to set approximately 600' of 5" liner at a depth of approximately 2980' opposite the Yates gas zone leaving the Queen pay open hole in an effort to reduce the well's gas-oil ratio and increase the oil production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
