DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill with rotary tools to the lower Devonian formation at about 3500'. Set 5 5/8" casing 100' and cement circulated. If productive set 5 1/2" casing to total depth and cement 100' to 3500', which gives a calculated fillup of 1,000'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
