**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to set approximately 200 feet of 9-5/8" (32#) casing in a 12 1/2" hole and cement sufficiently to circulate back into collar. We will set approximately 3000 feet of 5 1/2" casing (14.5# and 13.5#) and attempt to circulate cement back to shoe of surface casing.

Total depth of hole will be approximately 3750 feet, in the mean and.

Cement will be allowed 24 hours set time on surface casing and 72 hours on oil string. Both strings of casing will be tested before and after drilling cement.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
