Well No. 2-R is located 2310 ft. from [N] line and 660 ft. from [E] line of sec. 31

SE 1 NE 1 Sec. 31 24S 38E N.M.E.M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
West Dollarhide Lea New Mexico
(Field) (Queen) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this test to an approximate depth of 3750' for a test of the Penrose Sand of the Queen formation.

We propose to drill a 13-3/4" hole to 250' and set and cement 10-3/4" 32# casing on bottom with sufficient cement to circulate back to surface. We will drill a 7-5/8" hole below surface casing to a depth of approximately 3585' and run a string of new 14# 5 1/2" casing to bottom. Said 5 1/2" casing will be cemented with 750 sacks.

Reverse circulation will be used to drill 4-3/4" hole from bottom of 5 1/2" casing to total depth. Surface casing will be allowed cement time of 24 hours and pay string will be allowed 72 hours.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company Elliott & Hall

Address Roswell, New Mexico.
