DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this test to a depth of 6850' drilling a 17" hole to approximate depth of 200' and cementing 13 3/8" 48# casing at that depth with sufficient cement to circulate cement into cellar. We will cement 8 5/8" 28# casing at approximately 3100' isolating the salt section and circulating to the surface on the second stage. We will cement 5 1/2" 15.5# at 6400' with 400 sacks. Cement will be allowed to set 24 hours on surface, 36 hours on 8 5/8 and 48 hours on 5 1/2". All cement jobs will be pressure tested according to regulations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
