(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA) No. 1			
(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA) LOVED TO THE DATA No. 1 Y D is located 1650 ft. from N line and 2310 ft. from W line of sec. 1 (Marge) (Waridan) (Maridan) (Field) (County or Subdivision) (State or Territory) celevation of the derrick floor above sea level is ft. DETAILS OF WORK to names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs ing points, and all other important proposed work) Tropoge to 27111 this test to a depth of 6850 artiling a 17% hole to a depth of 200 and cereenting 13 3/6 and 12 centre at the test with entry county at 2100 isolating the solit section and circulating to the surface of the solit section			
I No. 1 Y D is located 1650 ft. from N line and 2310 ft. from W line of sec. (W Sec. and Sec. No.) (Twp.) (Range) (Meridian) (Pield) (County or Subdivision) (State or Territory) e elevation of the derrick floor above sea level is ft. DETAILS OF WORK to names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs ing points, and all other important proposed work) Propose to 1711 thin test to a depth of 6850 drilling a 17s hole to a depth of 200 and consenting 13 3/8s left caseing at that least with each with each of circulate coment into cellar. We will covert \$ 5/8s 28s casing strong and the subjection and circulating to the surface and the section and circulating to the surface and the subjection and circulating to the surface second stage. See will covert \$ 5/8 and 48 hours.			
I No. 1 Y D is located 1650 ft. from N line and 230 ft. from W line of sec. (K Sec. and Sec. No.) (Twp.) (Range) (Range) (Meridian) (Pield) (County or Subdivision) (State or Territory) e elevation of the derrick floor above sea level is			
(Kinge) (Meridian) Country of Subdivision) Country of Subdivision Country of Subdiv	, 19.5		
(Field) (County or Subdivision) (State or Territory) elevation of the derrick floor above sea level isft. DETAILS OF WORK names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs ing points, and all other important proposed work) propose to frill this text to a depth of 6850 drilling a 17s hole to a depth of 200 and certenting 13 3/8s casing at the lepth with suit or circulate certent into cellar. Se will cerent 3 5/8s casing at the lepth with suit orientedly 3100 isolating the sait specion and circulating to the surrountable second stage. Se will cerent 5 stages and 48 hours on 8 5/8 and 48 hours	,		
(Field) (County or Subdivision) (State or Territory) elevation of the derrick floor above sea level isft. DETAILS OF WORK names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs ing points, and all other important proposed work) propose toft to a depth of 650ft to a life to a depth of 650ft to a life to a life case of			
(Field) (County or Subdivision) (State or Territory) elevation of the derrick floor above sea level isft. DETAILS OF WORK names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs ing points, and all other important proposed work) Tropoge to frill this test to a depth of 6500 drilling a 17s hole to a depth of 200 and cementing 13 3/8s left casing at the test with such to circulate cement into cellar. Se will cement 5 5/8s 200 casing a continuous case of the such section and circulating to the surface second stage. Se will cement 5 at 6600 with 60 sacks.			
DETAILS OF WORK names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs ing points, and all other important proposed work) propose to crill thin test to a depth of 6850 drilling a 17s hole to a depth of 200 and cementing 13 3/8s less casing at the least with sufferent to circulate cement into cellar. He will cement 5 5/8s 28s casing worknessed allows the sufficient and circulating to the surface and stages. Se will cement 5 at 6600 with 40 sacks. On the surface of 5/8 and 48 hours on 8 5/8 and 48 hours			
repose to crill this test to a depth of 6850 drilling a 17s hole to a depth of 200 and cementing 13 3/8s 48s casing at the test with suited to circulate cement into cellar. He will cement 8 5/8s 28s casing at the test of the suited to circulate cement into cellar. He will cement 8 5/8s 28s casing at the test of the suited to circulate cement into cellar. He will cement 8 5/8s 28s casing at the solid casent and circulating to the suited cement of			
propose to frill this test to a depth of 6850' drilling a 17" hole to a depth of 800' and cementing 13 3/8" 48% casing at that lepth with suffect to circulate cement into cellar. We will cement 8 5/8" 28% casing woximately 3100' isolating the salt section and circulating to the surface second stage. We will cement 5%" 15.5% at 6800' with 800 sacks. On the second stage. We will cement 5%" 15.5% at 6800' with 800 sacks.			
propose to frill this test to a depth of 6850' drilling a 17" hole to a depth of 800' and cementing 13 3/8" 48% casing at that lepth with suffect to circulate cement into cellar. We will cement 8 5/8" 28% casing woximately 3100' isolating the salt section and circulating to the surface second stage. We will cement 5%" 15.5% at 6800' with 800 sacks. On the second stage. We will cement 5%" 15.5% at 6800' with 800 sacks.	bs, cen		
e depth of 200 and cementing 13 % and cement 3 5/8" 26% oneing sent to circulate cement into cellar. We will cement 3 5/8" 26% oneing woxinately 3100" isolating the salt section and circulating to the surface the second stage. We will cement 5%" 15.5% at 6000" with 400 sacks. On second stage.			
e depth of 200' and cementing 13 7/5" and cannot be sell cement 8 5/8" 26% oneing ent to circulate cement into cellar. We will cement 8 5/8" 26% oneing woxinately 3100' isolating the salt section and circulating to the surface at 6000' with 40 sacks. One second stage. We will cement 5%" 15.5% at 6000' with 40 sacks. One second stage.	ATTO		
went to circulate coment into collection and circulating to the surface second stage. So will coment 50 15.56 at 6400' with 50 sacks. It second stage. So will coment 50 15.56 at 6400' with 50 sacks. It
