**Justis-Blinebry**  
(Field)

**Lea**  
(County or Subdivision)

The elevation of the **Ground Level** ~~drill hole~~ above sea level is \_\_\_\_\_ ft. Elevation will be reported later.

### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well at the above location with rotary tools to an approximate total depth of 9600' to test the producing capabilities of the Blinebry formation. 950' of 8-5/8" O.D. 24# J-55 surface casing will be set and cemented to surface. Should the well prove productive, 4-1/2" O.D. 9.5# and 11.6# casing will be set to T.D. and cemented with a sufficient quantity to return cement into the base of the salt section at approximately 2100'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
