The elevation of the derrick floor above sea level is _____ ft. To be reported.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well with rotary tools to an approximate T. D. of 6200' to test the producing capabilities of the Elinebry and Tubb/Brinkard formations. 950' of 9-5/8" 36# H-40 surface casing will be set and cemented to surface. If the well proves productive, 5-1/2" 15.5# casing will be set as oil string and a single Elinebry completion attempted. Cement on the 5-1/2" casing will be returned to the base of the salt section.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
