(Range)

(Meridian)

Justis-Blinbry**Lea****New Mexico**

(Field)

(County or Subdivision)

(State or Territory)

The elevation of the derrick floor above sea level is _____ ft. **Will be reported later.****DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well at the above location with rotary tools to an approximate total depth of 5700'. This well will test the producing capabilities of the Blinbry formation. 950' of 8-5/8" O.D. 24# J-55 ST&C casing will be set and cemented to surface. Should the well prove productive, 4-1/2" O.D. 9.5# & 11.6# csg will be set to T.D. and cemented with a sufficient quantity to return cement into the base of the salt section at approximately 2100'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
