SUBJECT: Casing Repair - W.A. Ramsay (NCT-C)#4-M in 36-24-37

Dear Mr. Pitre:

The casing repair work done on the above-listed well appears to be adequate for the present. Your continued monitoring of the pressures should alert you to any further problems.

Very truly yours,

OIL CONSERVATION DIVISION

  
Jerry Sexton  
Supervisor, District I

ATTENTION: Mr. Jerry Sexton

Gentlemen:

Attached is the C-103 outlining repair work done on the subject well to eliminate surface pressure between the intermediate & surface and the intermediate & production casing strings.

On May 5, 1983, we put a gas meter on the 9-5/8" x 7" annulus to measure gas flow rate. The gas volume was TSTM using a 2" x 1/8" orifice plate, and only a small vapor of gas was visible. The casing was then closed in for one week, and the pressure on the 9-5/8" was only 5 psi. There is no pressure or flow on the 9-5/8" x 13-3/8" annulus. Therefore, we feel that our repair work was successful and request permission to continue monitoring the well.

Yours truly,

*for*   
R. C. Anderson
