(State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft.

### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Propose to drill with rotary tools from surface to total depth of approximately 12,150', in the Strawn formation. Casing program to be approx. as follows:

Size Hole	Size Casing	Casing Point	Feet Cement
17-1/2"	13-3/8"	390	400
12-1/4"	9-5/8"	5200	1582
8-3/4"	7"	11300	554
6-1/8"	5"	11100' - 12150' (Liner)	100

The pump and plug process will be used in cementing all strings of casing. Well to be completed thru 5" liner perforations.

We plan on drilling from 5200' to 11,300' or as far as hole conditions will permit using gas as a drilling fluid.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
