

Current laws and regulations pertaining to the disposal of human waste will be complied with.

Trash, waste paper, garbage and junk will be buried in a separate trash pit and covered with a minimum of 24 inches of dirt. All waste material will be contained to prevent scattering by the wind. Location of trash pit is shown on Exhibit "C".

All trash and debris will be buried or removed from the wellsite within 30 days after finishing drilling and/or completing operations.

8. Ancillary Facilities:

None required.

9. Wellsite Layout:

Exhibit "C" shows the relative location and dimensions of the well pad, mud pits, reserve pit and location of major rig components.

Minimum of 2-3 feet cut or fills will be required to level the well pad.

The reserve pit will be plastic lined.

10. Plans for Restoration of the Surface:

After completion of drilling and/or completion operations, all equipment and other material not needed for operations will be removed. Pits will be filled and location cleaned of all trash and junk to leave the wellsite in an aesthetically pleasing condition as possible.

Any unguarded pits containing fluids will be fenced until they are filled.

After abandonment of the well, any special rehabilitation and/or revegetation requirements of the surface management agency will be complied with and accomplished as expeditiously as possible. Weather permitting, all pits will be filled and levelled within 90 days after abandonment.

11. Other Information:

Topography: The land surface in the vicinity is a relatively level semi-desert plain.

Soil: Soil consists of 4" to 6" of sand on a caliche base.

Flora and Fauna: Vegetative cover is sparse and consists of mesquite, shinnery and native grass. Wildlife consists of coyotes, rabbits, rodents, reptiles, dove, quail and crows.

Ponds and Streams: None

Residences and Other Structures: The townsite of Jal, New Mexico is directly west of Section 21.
