To: United States Dept. of Interior
Geological Survey

Sirs,

In order to comply with federal regulations, please find here a description of the two-stage cement job performed on the referenced well.

Well: E.J. Wells #3

First Stage: 440 sx 50/50 Pozmix

Circulation lost initially, then regained after 20 Bbl slurry outside the casing. After opening the stage tool and circulating, approx. 10 Bbl cement was circulated out.

Stage Tool: 2830 from CBL-CCL

Second Stage: 600 sx Howco Lite

Circulation maintained throughout. No cement was circulated.

Top of Cement: 440 ft. from CBL-CCL

I certify that this information is correct to the best of my knowledge.

Jim Garrett
Engineer
