DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to a TD of 5930', set 9-5/8" OD 36#, Csg. at approximately 850' and circulate cement to surface. We propose to set 7" casing at T.D. and cement with a calculated volume of cement that will bring cement to surface casing. Dual completion will be made in the Blinchry and Tubbs zone thru 2 parallel strings of tubing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
