**Re: Notification of Hydrocarbon Sales from Justis Abo form.
C. C. Fristoe "B" Federal NCT-2 #15 (new drill)
Unit Letter C, Section 35, Township 24S, Range 37E
Lea County, New Mexico**

Dear Mr. Sexton,

The subject well was drilled November, 1995 and tested in the Justis Abo interval. During the months of December, 1995 and January, 1996, a total of 59 barrels oil and 454 MCF gas was produced from the said formation and sold through the Fristoe "A" and "B" consolidated battery. Due to the non-commercial volumes of produced Hydrocarbons, Texaco Abandoned the Abo formation by setting a cast iron bridge plug at a depth of 6260' and capped with 35' cement. For this reason a permanent allowable was not obtained by Texaco.

If you have any questions concerning this matter please contact myself at (505) 397-0426.

Sincerely,

Darrell J. Carriger
Engineering Assistant - Texaco E & P Inc. - Hobbs Operating Unit
