DETAILED ACCOUNT OF WORK DONE, NATURE AND QUANTITY OF MATERIALS USED AND RESULTS OBTAINED.

A Lane-ells gamma ray and neutron was run, which did not indicate additional pay to be perforated. Tubing was run with a Baker Call-bore retrievable cementer in preparation for treating the well. The formation was treated down the 4-inch tubing through perforations from 2800 to 2991 with 10,000 gallons of refined oil and 10,000# of sand. Maximum pressure was 2700#, and the minimum pressure was 2000#, with an average injection rate of 22 barrels per minute. Flushin and overflushing with 48 barrels of lease oil completed the job.
