Attn: Mr. S. J. Stanley

Dear Sir:

After a thorough check of our files, we find the above captioned well is not an open hole completion in the Queen pay as previously reported, but is producing gas from the Yates zone through perforations 2920-2950 and 2960-3020. A Lane Wells bridge plug is set in the 7" casing at 3300 sealing off the Queen zone.

Since this well is carried on the oil proration schedule as a Queen gas well under the Langlie-Mattix field, we desire that it be carried on the gas proration schedule as a Yates gas well in the Jalco gas pool and assigned a gas allowable based on 160 care unit.

Attached are corrected Forms C-104, C-110 and Gas Plat for the well.

Yours very truly,

R. OLSEN OIL COMPANY

AARON CUMMINGS
Gas Engineer
