The elevation of the derrick floor above sea level is **3278** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total Depth, 3513' Lime, 7" casing @ 3400'.

This well was acidized on July 27, 1943, with 1000 gallons acid from approximately 3445' to 3505' using 6' to 8' of jelly seal in the bottom of the hole to prevent increasing the water production.

Before acidizing, the well was producing 18 bbls. oil plus 85% water, and on 8-5-43 it pumped 38 bbls oil plus 76% water in 24 hours.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
