DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total depth, 3515', 11me. 7" casing cemented at 3318' with 175 sacks.

Production from this well has declined to such an extent that it is difficult to maintain the present assigned allowable. Therefore, we desire permission to acidize this well with approximately 2000 gallons of acid from approximately 3310' to 3515' in an attempt to increase production.

Results of this operation will be reported after completion of treatment and testing

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
