

DUPLICATE

OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELLS

RECEIVED
MAY 19 1949
HOBBBS OFFICE

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below.

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING CHEMICAL TREATMENT OF WELL	X	REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF		REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL

THEORY OF THE EARTH

CHAPTER I

THE EARTH AND ITS HISTORY

The Earth is a planet of the solar system, and is the only one of which we have direct knowledge. It is a sphere, and is composed of a solid inner core, a liquid outer core, and a solid crust. The crust is the part of the Earth which we live on, and is composed of rocks and minerals. The crust is divided into continents and oceans. The continents are the large land masses, and the oceans are the large bodies of water. The Earth has a history, and has changed over time. The history of the Earth is divided into eras, and the eras are divided into periods. The eras are the Pre-Cambrian, the Cambrian, the Paleozoic, the Mesozoic, and the Cenozoic. The periods are the eras divided into smaller units of time. The history of the Earth is a story of change, and of the forces that have shaped the planet.
