Re: Completion, TEXACO Inc.  
E. D. Fanning Well No. 6  
Langlie-Mattix Pool  
Unit "D" Section 4, T-24-S, R-37-E  
Lea County, New Mexico

Attention: Mr. Joe D. Ramey

Gentlemen:

Attached are packer setting affidavit, packer leakage test, and diagrammatic sketch of equipment installation for the subject well.

Approval to dually complete the well in the Jalmat (Gas) Pool (Yates-Seven Rivers formations) and Langlie-Mattix Pool (Penrose formation) was granted by Order No. DC-932, dated May 4, 1960. The Jalmat (Gas) reservoir was not productive of gas, oil or water; therefore, the well was singly completed in the Langlie-Mattix Pool. A Baker Model "D" permanent-type packer had been set between the zones prior to determining that the Jalmat (Gas) reservoir was not productive; therefore, due to the expense involved, it was decided to not squeeze off these perforations. A single string of tubing with seal nipples latched into the Baker packer, effectively separates the productive Langlie-Mattix pay from the non-productive Jalmat (Gas) section above. Should remedial work be necessary on the Langlie-Mattix zone in the future the Jalmat section will be squeezed off at that time.

Yours very truly,

TEXACO Inc.
