

Memo

From

CARL ULVOG

SENIOR

PETROLEUM GEOLOGIST

To

John Runyan:

Enclosed are copies of Skelly's applications for the dual completions which were approved by MC-2200 and MC-2201. Original applications (and schematic drawings) indicated they really wanted approval for salmat production and Langlie-Mattix injection. I confirmed this by telephone call and said "No Way" by administrative order. That explains why my order went out before these applications came in. They intend to convert the Langlie-Mattix to injection later, they said.
