CLINICAL OBSERVATIONS

THE following case is of interest because of the unusual combination of symptoms which it presents. It is a case of a young man who has been suffering from a chronic disease of the lungs for many years. The disease is characterized by a persistent cough, which is usually accompanied by the expectoration of a large quantity of sputum. The sputum is usually of a purulent character, and is often accompanied by a small amount of blood. The patient also complains of a constant feeling of weakness and fatigue, and of a loss of appetite. The disease is usually fatal, and the patient usually dies within a few years of the onset of the disease.

The patient is a young man, aged 25 years, who has been suffering from a chronic disease of the lungs for many years.
