

# OIL CONSERVATION COMMISSION

HOBBS, NEW MEXICO

April 18, 1957

Dalport Oil Corp.  
930 Fidelity Union Life Bldg.  
Dallas, Tex.

Gentlemen:

Mr. W. A. Gressett, Oil and Inspector for the Commission, has made an inspection of the location for your Hair "B" No. 1 in Unit M of Section 11, T-24-S, R-37-E and has found that the dead men wires have not been cut, the fire wall for the tank battery has not been filled and the location has not been inscribed on the marker as required by the Commission.

Please advise this office when these things have been done so that a final inspection of the location may be made and your Report of Final Plugging approved without further delay.

Yours very truly,

OIL CONSERVATION COMMISSION

R. F. Montgomery  
Proration Manager

1959-1960  
1961-1962

1. The first step is to identify the problem. This  
 2. can be done by asking the following questions:  
 3. What is the problem? What are the symptoms?  
 4. How long has the problem been going on?  
 5. What has been tried so far?  
 6. What are the possible causes?  
 7. What are the possible solutions?  
 8. Which solution is the best?  
 9. How can the problem be prevented from happening again?

1. The first step is to identify the location of the building. This is done by looking at the map and finding the building's location.

[illegible]

2. *Phylogenetic relationships*—Phylogenetic relationships were determined using the parsimony method of Farris (1993) with the computer program PAUP (version 4.0). The parsimony method was chosen because of the lack of a priori knowledge of the evolutionary relationships among the taxa. The parsimony method was chosen because of the lack of a priori knowledge of the evolutionary relationships among the taxa. The parsimony method was chosen because of the lack of a priori knowledge of the evolutionary relationships among the taxa.
