## YATES PETROLEUM CORPORATION THYME "APY" FEDERAL #6 1650' FNL AND 1650' FWL SECTION 1-T23S-R32E LEA COUNTY, NEW MEXICO

1. The estimated tops of geologic markers are as follows:

| Rustler        | 1260' | Bone Spring | 8800' |
|----------------|-------|-------------|-------|
| Top of Salt    | 1295  | TD          | 9200′ |
| Bottom of Salt | 4680' |             |       |
| Delaware       | 4968' |             |       |
| Cherry Canyon  | 5990' |             |       |

2. The estimated depths at which anticipated water, oil or gas formations are expected to be encountered:

Water: 250-750 Oil or Gas: 8800'

3. Pressure Control Equipment: BOPE will be installed on the 13 3/8" casing and rated for 3M BOP systems will be consistent with API RP 53. Pressure tests will be conducted before drilling out from under all casing strings which are set and cemented in place. Blowout Preventor controls will be installed prior to drilling the surface plug and will remain in use until the well is completed or abandoned. Preventors will be inspected and operated at least daily to ensure good mechanical working order, and this inspection recorded on the daily drilling report. See Exhibit B.

Auxiliary Equipment:

- A. Auxiliary Equipment: Kelly cock, pit level indicators, and a sub with full opening valve to fit the drill pipe and collars will be available on the rig floor in the open position at all times for use when kelly is not in use.
- 4. THE PROPOSED CASING AND CEMENTING PROGRAM:
  - A. Casing Program: (All New)

| <u>Hole Size</u> | Casing Size | <u>Wt./Ft</u> | <u>Grade</u> | <u>Thread</u> | <u>Coupling</u> | Interval  | <u>Length</u> |
|------------------|-------------|---------------|--------------|---------------|-----------------|-----------|---------------|
| 14 3/4"          | 11 3/4      | 42#           | J55          | 8R            | ST&C            | 0-1270′   | 1270′         |
| 11"              | 8 5/8       | 32#           | J55          | 8R            | ST&C            | 0-4200'   | 4200'         |
| 12 1/4″          | 8 5/8       | 32#           | HC80         | 8R            | ST&C            | 4200-4810 | 610'          |
| 7 7/8"           | 5 1/2       | 17#           | N80          | 8R            | LT&C            | 0-2000'   | 2000'         |
| 7 7/8"           | 5 1/2       | 17#           | J55          | 8R            | LT&C            | 2000-3000 | 1000'         |
| 7 7/8"           | 5 1/2       | 15.5#         | J55          | 8R            | LT&C            | 3000-7000 | 4000'         |
| 7 7/8"           | 5 1/2       | 17#           | J55          | 8R            | LT&C            | 7000-8500 | 1500'         |
| 7 7/8"           | 5 1/2       | 17#           | N80          | 8R            | LT&C            | 8500-9200 | 700'          |

Minimum Casing Design Factors: Callapse 1.125, Burst 1.0, Tensile Strength 1.80

#### B. CEMENTING PROGRAM:

Surface casing: 550 sx. Pacesetter Lite "C" w/ 1/4# Cellocel & 3% CaCl2 (wt. 12.4 ppg. Yield 1.84 ft3) + 250 sx. Class "C" w/ 2% CaCl2. (wt. 14.8 ppg., Yield 1.32 ft3) Cement calculated to circulate to surface.

Intermediate Casing: 1500 sx. Pacesetter Lite "C" w/ 1/4# Cellocel + 3% CaCl2. (wt. 14.8 ppg. Yield 1.32 ft 3) + 250 sx. Class "C" w/2% CaCl2. (wt. 14.8 ppg. Yield 1.32 ft3) Cement calculated to circulate to surface.

Production Casing: 1st Stage: 250 sx. "H" w/8# sack CSE, + 0.6% CF-14 + 5# sack Gilsonite (wt. 13.6 ppg Yield 1.75 ft3) Cement calculated to 8000' DV tool set at approx. 8000 ft.

2nd Stage: 650 sacks pacesetter lite "C" w/5# sack Gilsonite, 1/4# sack Cellocel, + 0.5% CF-14.(wt. 12.7 ppg Yield 1.84 ft3) + 150 sacks "H" w/0.5% Cf-14 (wt. 13.6 ppg Yield 1.78 ft3). Cement calculated to tie back to intermediate csng. 100'.

5. Mud Program and Auxiliary Equipment:

| <u>Interval</u> | <u>Type</u>        | <u>Weight</u> | <u>Viscosity</u> | Fluid Loss |
|-----------------|--------------------|---------------|------------------|------------|
| 0-1170'         | FW Gel, Paper. LCM |               | 32-36            | N/C        |
| 1170'-4810'     | Brine              | 10.0-10.2     | 28               | N/C        |
| 4810'-6500'     | Cut brine,         | 8.9 - 9.1     | 28               | N/C        |
| 6500'-9200'     | Cut brine, Starch  | • 8.9 - 9.1   | 30-33            | <15cc      |

Sufficient mud material(s) to maintain mud properties, control lost circulation and contain a blow out will be available at the well site during drilling operations. Mud will be checked hourly by rig personnel.

## 6. EVALUATION PROGRAM:

|                   | Every 20' from surface to 4000', 10' from 4000' to TD.<br>CNL/LDT from TD to casing with GR-CNL up to surface; DLL w/RXO  |
|-------------------|---|
| Coring:<br>DST's: | from TD to casing; CMR over slected intervals<br>None anticipated<br>Any tests will be based on the recommendations of the well site geologist<br>as warranted by drilling breaks and shows |

7. Abnormal Conditions, Bottom hole pressure and potential hazards: Anticipated BHP: From: 0 TO: 1170 Anticipated Max. BHP: 250

| From: | 1270 | TO: | 4810 | Anticipated Max. BHP | : 2062 | PSI |
|-------|------|-----|------|----------------------|--------|-----|
| From: | 4810 | TO: |      | Anticipated Max. BHP |        | PSI |

PSI

Abnormal Pressures Anticipated: None

Lost Circulation zones anticipated: None

H2S Zones Anticipated: None

Maximum Bottom Hole Temperature: 140F

8. ANTICIPATED STARTING DATE:

Plans are to drill this well as soon as possible after receiving approval. It should take approximately 15 days to drill the well with completion taking another 20 days.

+

#### MULTI-POINT SURFACE USE AND OPERATIONS PLAN Yates Petroleum Corporation THYME "APY" FEDERAL #6 1650' FNL AND 2310' FWL SECTION 1-T23S-R32E LEA COUNTY, NEW MEXICO

This plan is submitted with Form 3160-3, Application for Permit to Drill, covering the above described well. The purpose of this plan is to describe the location of the proposed well, the proposed construction activities and operations plan, the magnitude of the surface disturbance involved and the procedures to be followed in rehabilitating the surface after completion of the operations, so that a complete appraisal can be made of the environmental effect associated with the operations.

## 1. EXISTING ROADS:

Exhibit A is a portion of the BLM map showing the well and roads in the vicinity of the proposed location. The proposed wellsite is located approximately 41 miles Northwest of Jal, New Mexico and the access route to the location is indicated in red and green on Exhibit A.

## **DIRECTIONS:**

Go east of Carlsbad on Hwy 285 to Hwy 31. Go east on Hwy 31 to Hwy 128 (Jal Hwy). Go approximately 17 miles to a major pipeline road. Turn left and go approx. 5.7 miles. Turn left (NW) and go approx. 1.4 miles and turn right. Go approx. 3.1 miles. Go approximately 1 mile east to Thyme #1 location. Turn south to the Thyme #2 location. new ccess will start here.

- 2. PLANNED ACCESS ROAD
  - A. The proposed new access will be approximately 1000' in length from the point of origin to the southeast corner of the drilling pad. The road will lie in a(n) westerly direction west 1000'.
  - B. The new road will be 14 feet in width (driving surface) and will be adequately drained to control runoff and soil erosion.
  - C. The new road will be bladed with drainage on one side. No traffic turnout will be built.
  - D. The route of the road is visible.
  - E. Existing roads will be maintained in the same or better condition.

# 3. LOCATION OF EXISTING WELL

- A. There is drilling activity within a one-mile radius of the wellsite.
- B. Exhibit D shows existing wells within a one-mile radius of the proposed wellsite.

## 4. LOCATION OF EXISTING AND/OR PROPOSED FACILITIES

- A. There are production facilities on this lease at the present time.
- B. In the event that the well is productive, the necessary production facilities will be installed on the drilling pad. If the well is productive oil, a gas or diesel self-contained unit will be used to provide the necessary power. No power will be required if the well is productive of gas.
- C. A 3" steel flowline will be laid on the surface following the access road to the tank battery on the #1 location.
- 5. LOCATION AND TYPE OF WATER SUPPLY:
  - A. It is planned to drill the proposed well with a fresh water system. The water will be obtained from commercial sources and will be hauled to the location by truck over the existing and proposed roads shown in Exhibit A.
- 6. SOURCE OF CONSTRUCTION MATERIALS:

Federal pit located in the NE of Section 15-T23S-R32E

- 7. METHODS OF HANDLING WASTE DISPOSAL:
  - A. Drill cuttings will be disposed of in the reserve pits.
  - B. Drilling fluids will be allowed to evaporate in the reserve pits until the pits are dry.
  - C. Water produced during operations will be collected in tanks until hauled to an approved disposal system, or separate disposal application will be submitted.
  - D. Oil produced during operations will be stored in tanks until sold.
  - E. Current laws and regulations pertaining to the disposal of human waste will be complied with.
  - F. All trash, junk, and other waste materials will be contained in trash cages or bins to prevent scattering and will be removed and deposited in an approved sanitary land fill. Burial on site is not approved.
- 8. ANCILLARY FACILITIES: NONE
- 9. WELLSITE LAYOUT:
  - A. Exhibit C shows the relative location and dimensions of the well pad, the reserve pits, the location of the drilling equipment, rig orientation and access road approach.
  - B. The reserve pits will be plastic lined.
  - C. A 400' x 400' area has been staked and flagged.

## 10. PLANS FOR RESTORATION

- A. After finishing drilling and/or completion operations, all equipment and other material not needed for further operations will be removed. The location will be cleaned of all trash and junk to leave the wellsite in as aesthetically pleasing a condition as possible.
- B. Unguarded pits, if any, containing fluids will be fenced until they have dried and been leveled.
- C. If the proposed well is non-productive, all rehabilitation and/or vegetation requirements of the Bureau of Land Management will be complied with and will be accomplished as expeditiously as possible. All pits will be filled level after they have evaporated and dried.
- 11. SURFACE OWNERSHIP: Federal surface administered by BLM.
- 12. OTHER INFORMATION:
  - A. Topography: Refer to the existing archaeological report for a description of the topography, flora, fauna, soil characteristics, dwellings, historical and cultural sites.
  - B. The primary surface use is for grazing.
- 13. OPERATOR'S REPRESENTATIVE
  - A. Through A.P.D. Approval:

Clifton R. May, Regulatory Yates Petroleum Corporation 105 South Fourth Street Artesia, New Mexico 88210 Phone (505) 748-1471 B. Through Drilling Operations, Completions and Production:

> Brian Collins, Operations Manager Yates Petroleum Corporation 105 South Fourth Street Artesia, New Mexico 88210 Phone (505) 748-1471

#### 14. CERTIFICATION:

I hereby certify that I, or persons under my direct supervision, have inspected the proposed drill site and access route, that I am familiar with the conditions which presently exist; that the statements made in this plan are to the best of my knowledge, true and correct; and , that the work associated with the operations proposed herein will be performed by Yates Petroleum Corporation and its contractors and subcontractors in conformity with this plan and the terms and conditions under which it is approved. This statement is subject to the provisions of 18 U.S.C. 1001 for the filing of a false statement.
